Subject: RE: Question about the academic demand of dispensing optics as compared to optometry

Dear Steve,

I can confirm that entry requirements do reflect course academic demand.

The BSc Dispensing Optician Registerable Award (3 Years Blended Learning, Bachelor of Science Degree, requires students to be employed as a Trainee Dispensing Optician) and MOpt Optometry Course (4 Years Masters Degree, full time study at the Cambridge Campus) are two completely different qualifications and subsequent careers.

The GOC provides an explanation of each of them https://optical.org/en/education-and-cpd/education/a-career-in-optics/

Each of our Course Pages on the ARU Website detail the Course content and entry requirements. Both course are accredited by the General Optical Council (GOC). The courses at ARU are not the same, they both have their own set of modules that are personal to the respective courses. The content of which varies significantly.

BSC (HONS) Dispensing Optician Registerable Award

You don't often get email from steveguire123@outlook.com. Learn why this is important

TAKE CARE: this message originates from an email service outside of our University. Do not click on any links or open attachments unless you recognise the sender and are absolutely sure that the content is safe

Hello

Do the entry requirements for a particular course at your university reflect in any way the academic demand of said course I.e. the depth and breadth of understanding required of candidates who enter the course?

This is what I have been told by the admissions tutors of at least 6 different universities; in that yes, entry requirements do reflect course academic demand.

I have noticed that the average offer for Dispensing optics is DEE at A Level according to the GOC.

For optometry it is AAB-AAA (AAA in 2017).

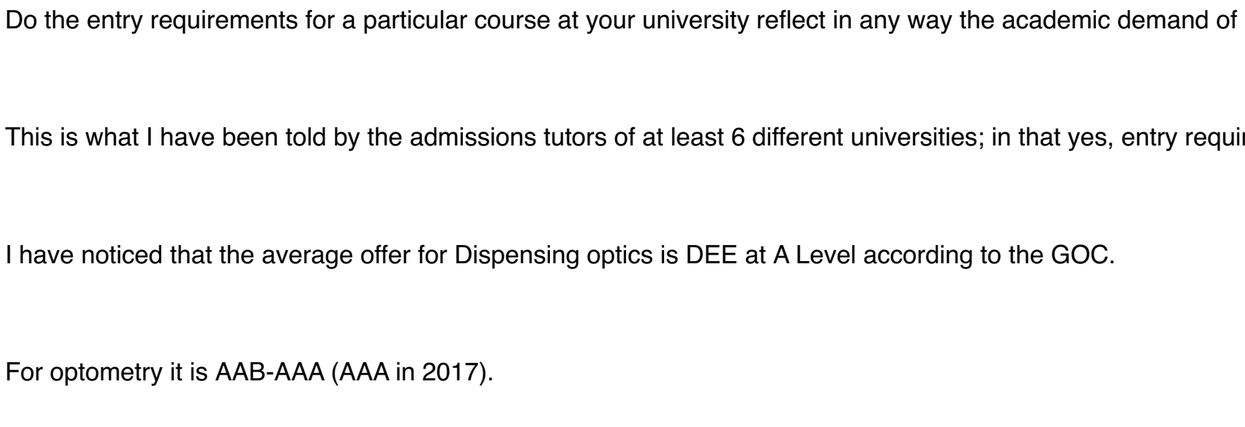

I wanted to know why this is the case, when the course content is exactly the same.

Or is this not true? Does the depth/breadth of the course content in these two disciplines vary? Is the course content virtually identical?

Regards,

Steve
