Dear Aryan,

Thank you for your email and your interest in the University of Bath.

Our typical entry requirements for Chemistry require an A in Chemistry. There are 2 sets of criteria depending on what subject combination that you are currently studying. I've copied them in below:

- If you study Chemistry and at least two other maths or science subjects: AAB in three A levels including A in Chemistry and two other science or mathematics subjects.
- If you study Chemistry and only one other maths or science subject: AAA in three A levels including Chemistry and one other science or mathematics subject.

Therefore the course is delivered expecting students entering the course to have achieved an A in Chemistry and the course content will be pitched appropriately. Most students on this course will have achieved an A or occasionally a B in Chemistry and go on to succeed on this course.

You may find this website helpful as it details the breakdown of the course and includes information on the modules taken: https://www.bath.ac.uk/catalogues/2024-2025/ch/USCH-AFB20-f.html

I hope that answers your questions
Kind regards,
UG Admissions

Subject: FW: Question on the level of difficulty of your chemistry programs

Good afternoon,

I received the inquiry below a few weeks ago and was unsure how to respond, would you be able to offer a more informed response? Or recommend the appropriate team to forward this onto?

Warmest regards,
Matthew

UNIVERSITY OF BATH

Matthew Bedson (he/him)

You don't often get email from athanki5670@gmail.com. Learn why this is important

CAUTION: This email came from outside of the University. To keep your account safe, only click on links and open attachments if you know the person who sent the email, or you expected to receive this communication.

Hello

I hope to hear from you soon

Thanks

Aryan

>
> The entry requirements do not indicate you do not need an A* in Chemistry A Level.
>
> For reference, A* A Level Chemistry students typically can answer very high demand questions that over 90 percent of candidates get wrong. They can solve very complex and challenging novel scenarios and situations requiring a very high level of knowledge and understanding of the chemical principles assessed at A Level.
>
> The A* as a grade is typically only asked for by the top institutions, e.g Russell Group and the likes of Oxbridge. I have spoken to them on this- and apparently they ask for these exceptionally high grades for a reason. Because you need that prior depth of understanding to do the course in the first place.
>
> This is a very high ability in terms of grades and I do not have it- I am only on a B/A boundary.
