Hi Tom
I simply draw and paint from reference photos.
So all I really need to have an understanding of is colour, light and shadow, and to just observe what I'm looking at and try to recreate that on the page.
I think some old artists, like Michelangelo and Di Vinchi studied anatomy, but that was before photography and its not necessary for my practice
Hope that helps!
Darren

Hello

Do you need to have excelled or done well in GCSE Physics or A Level Physics to produce work like what you produce? You mentioned you need to understand light and colour etc but I was wondering in what context. Light comes under optics which is a branch of physics I am currently studying in my Masters degree in Optometry

Thanks

Tom

No you don't need to have a physics-level understanding of light, only need to accurately observe light as you see it.
That's what artists have done for centuries, before we understood what light was.
The biggest struggle with any kind of painting or drawing is to draw what you actually see, and not what you think you see.

Thanks

Darren
