Hello

I hope you are well.

I had a question regarding the percentage of viewers who watch your videos and gain a 9, 8, 7 etc at GCSE in English Language/Literature.

Also, I had another question. Say someone has a 9 in English Literature. Someone else has a 6 in English Literature. The person who gets a 6 takes it for A Level and ends up with a C. The person with a 9 doesn't take it for A Level.

Who is better at the subject?

Then again, official data shows that people who get 6's and below do end up with C/D's at A Level anyway in English Literature. Does the grade C correspond to a 9 at GCSE? So therefore the person with a C resit their GCSE and then effortlessly gain a 9 just because they have done the A Level (although not very well)

There are elements though of Grade 9 responses which do overlap with A Level? Such as anagorisis.
So therefore someone with a C could very easily resit their GCSE and gain a 9, as a 9 at GCSE equates to a C at A Level?

Or is this deeply flawed? Generally speaking, do people just work with the knowledge base they already have, using that (and what they've picked up along the way) to gain the A Level grade? So not necessarily making huge advances.

Many thanks

Tom Piccolo

Hi Tom,

Think about your GCSE grade this way:

1. Does it reflect how well I write English essays, linking evidence in an argument about the author's ideas?
2. Does it reflect how well I understand the text, and the author?
3. Does it reflect how many quotes I know and how much of the texts I remember?
4. Does it reflect how fast I can think and write?
5. Does it reflect how much I know about the life and times of the author?
6. Does it reflect how hard I have studied, my work ethic?

Looked at this way, grades 4 -7 don't really tell you very much. A hard working average student can gain grade 7, but a really clever lazy student can also get grade 7.

Grades 8 and 9 can be scored by students who have done very well at all of 1 - 6. But, a high ability student can get a grade 9 by only being great at 1, 2 and 4.

To do well at A level, you need to be good at all 6.

Thanks,

Dominic

Hello

Many thanks for your email reply.

By doing well at A Level I don't think you mean B and C grades.
These are average grades and are generally scored by people with not really good ability at GCSE- only 6 and 7. A and A* are scored by those with grade 8 and 9's, so a grade 9 is really quite better than a C, say or a B at A Level as it reflects a higher level of ability than the GCSE grades of students who actually get B and C grades.

I don't think you mean to say that say someone with a B/C is the equivalent of a 9 at GCSE? They don't display the same attributes.

People who do well at A Level typically get A-A* and go to top universities.

Many thanks

Tom Piccolo
