Hi Aryan,

No problem, you seem very well researched in this area and I wanted to make sure I was interpreting your questions correctly.

To answer your brothers question yes he certainly would be able to complete the sports science programme without having A* in biology. We take a lot of students from varied backgrounds in terms of qualification types and they achieve well.

We also take students from BTEC would do not have a specific A level biology but have cover anatomy and physiology within their course.

Thanks for your number I just tried to call but missed you. I have to teach now but if you would like to discuss this further, let me know a time that works for you.

Kind Regards

Jon
