Dear Aryan,

Thank you for your email.

The University of Leeds reviews the content of international qualifications for undergraduate courses by comparing them to A-Level requirements. The admissions department, with input from academic staff, ensures that all students have the necessary background for their chosen course.

We use information from UK ENIC (the UK National Information Centre for the recognition and evaluation of international qualifications and skills) and ECCTIS (Education Counselling and Credit Transfer Information Service), which again compare qualifications to the level of study required for entry to undergraduate and postgraduate degrees. When courses have subject prerequisites, the qualification syllabus is reviewed to ensure the required content has been studied.

If you have any further queries regarding the admissions process for a particular course, please use the “contact” email provided on the course pages and the relevant admissions team will be able to provide you with advice and guidance on entry requirements and the admissions process.

Kind regards,

Information Compliance Officer
University of Leeds

Subject: FOI request concerning Indian “A Level equivalent” 12th Standard qualifications

CAUTION: External Message. Use caution opening links and attachments.

Hello

I am an Indian living in the UK and am requesting information concerning your rationale behind equating A Level qualifications taken by students in England in Year 13, with equivalent qualifications (12th standard exams, e.g CBSE) taken by students from India.

You have detailed on your website that you comprehensively analysed and looked at the syllabus and the examination format/ difficulty to assess the equivalencies of Indian exams and British A Level exams.

I need details on what you found. Tables, data, just please provide what you found from the results of your analyses comparing Indian and UK examinations at 12th standard/A Level.

I require details on what equivalency was found for 12th Standard Sciences e.g Biology, Chemistry and Physics, compared to UK A Levels in Biology, Chemistry and Physics.

I also require details on what was found regarding the usage of calculators in A Level Maths (permitted) and their use in 12th standard Indian board exams e.g CBSE

In short, I require all the details concerning how you came to the conclusion that Indian 12th standard qualifications in any way at all are equivalent to UK A Levels. And what equivalencies you found.

Please endeavour to provide as much information as you can on this. If you are unable to provide some of the information please provide the information you do have.

Many thanks

Aryan
