Dear Aryan,

Thank you for your email and interest in working with us.

It's been great to see so much enthusiasm for our proposal and support from local people.

If we proceed with the project, it is expected that a significant number of new roles will be created for the area at many different levels.

We're committed to advertising these jobs to local residents first where possible and will engage with the community at the appropriate time if the project proceeds.

Thank you again for your interest.

Kind regards,

The Universal UK Project Team

Subject: Question on careers at Universal Studios in the STEM sector

Hello

I need advice on what career options are available at universal in the STEM sector e.g if I had a degree in:

Physical Sciences

Chemical Sciences

Life Sciences

Natural Sciences

Engineering

Etc

What options are open to me and on what basis do you select and hire candidates from those who apply? Is it to do with level of education and competence demonstrated?

Would attendance at a top Russell Group university, or an Ivy League university in the US, studying STEM subjects put my application at an advantage?

Regards

Aryan
