Dear Aruna:

Thank you for your email. I am both the Programme Leader and Exam Officer for all Chemistry Degrees at Lincoln. All content and exam questions go through me for the Departmental degrees.

Each exam paper and coursework assessment is pitched at evaluating your true potential in chemistry. We take special care in having a gradient of difficulty from easy base knowledge to more creative use of your chemistry knowledege and understanding. Typically, 80-85% of the marks will be from easy to medium levels of understanding and 15-20% from high levels (or A-A* levels that you mention).

In short: I can ensure you that you can complete the degree programme, even if you cannot answer the more advanced questions that will crop up from year to year. I suspect you can aim for a 2:1, based on your email information, which would be great for you!

Hope this puts your mind at rest Aruna.

Kind regards,

Dr Lear

Hello

Thanks so much for this information. I was worried about not having an A* in the subject but also doing it as a degree. This is very helpful.

Regards

Aruna

Hi Martin

Just as a side question, is it generally routine that universities pitch requirements

for a course at the level needed to do the course successfully, much like how you described the requirements set out in your exam papers as broadly in line with the entry requirements for the course? Would they have some procedure to ensure this?

I noticed that you also work in a university in Japan (from your email signature) which is why I asked, maybe you have experience first hand as to how it is elsewhere. I am Indian and several of my friends are international students and have the same worries as me...

Thanks so much

Aruna

Hi Aruna:

Yes - most UK universities do this process of pitching, less so in Japan as entry requirements are more severe there.

Kind regards,

Martin.

Hello

So would I be required to necessarily work at an A* level in a typical Japanese university, neccessarily? Or have I overthought your statement?

Regards

Aruna

You would need to pass entrant exams at a high level... Before entering the university ...

Hello

How are these entrance exams in comparison to a typical A level chemistry paper? Would you be able to provide an estimate? E.g pitched at the A*, A, B, C etc

Regards

Aruna
