Hello Aryan,

Thank you for your thoughtful follow-up questions.

To clarify, our admissions requirements are tailored to align with the academic demands and foundational knowledge necessary for each specific program. For example, entry criteria for accredited programs, such as Biomedical Science, may differ from those in other areas, such as Sports Science, as each program reflects unique professional standards and preparation needs.

At the University of Hertfordshire, we design our requirements to support the curriculum of each discipline and to ensure students have the academic foundation needed for success.

Thank you again for your interest in UH.

Best wishes
Laura

**Subject:** A query concerning transparency in course entry requirements for UH biological sciences

Hello

I have a question concerning what level of academic ability you need to do a particular UH course:

I quote from the first email you sent me:

We accept a minimum A level of BTEC grade that will ensure that students have the knowledge base necessary to follow the content of our courses

The minimum a level grade you accept is around a B or a C, and going by the above statement you made, students with these grades have the knowledge base necessary to follow the content of your courses. This indicates that you have ensured that, by setting the requirement of grades to a B/C, this ensures the entering students have the knowledge base to follow the course content.

Further to our correspondence:

I have spoken with UH lecturers in the department of Sports Science and they told me two things:

In response to my question “do you need to be working at the level of an a* student in Biology” **they answered no, you do not, or we would ask from them in our entry requirements. We ask for a B. Not an A*, and that is for a reason.**

This clearly evidences transparency. Because the implication is what a UH course asks for, you need.

They told me that the entry requirements of BBC for their sports science degree is evidence backed-grades at this specific intermediate level give students the best chance of doing well on their courses. In other words they are saying that you can do well on the course with a B or a C. They have made it clear that you don’t need an A* to follow their course content.

This is via correspondence I have received from one of the senior lecturers working in the department of Sports Science.

I hope to hear from you soon

Thank you

Aryan
