Hello,

Thank you for getting in touch.

Our universities set their entry requirements by considering a range of factors including course demand and academic rigour to ensure students accepted can succeed in their studies. Each institution is responsible for setting its own entry requirements, course content and assessment design. At all of our institutions, students will be supported by teaching staff to prepare for assessment.

As a policy-focused membership organisation the Russell Group is not in a position to speak to the level evaluation is pitched to at individual institutions - and this is not something which can be easily measured and compared. What is measured, however, is the quality of courses at higher education institutions. This is done by the Office for Students (OfS), which measures quality against three core metrics: progression, completion and continuation. All our universities in England exceed the minimum quality thresholds the OfS has set for these measures and are taking steps to continuously improve the quality of their education.

You can find links to our 24 universities here: https://russellgroup.ac.uk/about/our-universities/

Many thanks,

Debbie

Subject: Question on Russell Group STEM courses

CAUTION: This message originated externally, please use caution when clicking on links or opening attachments!

Hello

Is it true that examination questions for STEM courses at Russell Group universities are generally set at a higher (A-A* level) in comparison to those questions set by STEM courses at other universities, and that these higher standard courses reflect themselves in the high entry requirements needed for admission

I understand that Russell Group courses set a higher bar for admission, usually A-A* grades at A Level. May I ask how this reflects itself within the courses you offer, and their academic demand in terms of examination questions and what level the typical question is pitched at. As in, the typical question is designed to be answered correctly by an A grade A Level student, so set at a high level.

Thanks

Aryan
